**AMMONIA PLANT CONSTRUCTION –
PROJECTED MANPOWER INCREASE**

Wyoming Department of Environmental Quality
Industrial Siting Division
Attn: Ms. Kimber Wichmann, Principal Economist
200 West 17th Street, 4th Floor
Cheyenne, WY 82002

Dear Ms. Wichmann:

Per our telephone conversation on February 3rd, this letter and attached manpower estimate graph will serve to notify the ISD that our construction contractors plan to shift more of the construction work to the upcoming summer months and increase the maximum projected workforce needed to successfully complete the project on schedule.

As you can see from the attachment manpower curve, the peak work force is estimated to peak at approximately 750 employees during the June of 2016.

As stated in our original application and testimony, Simplot does not believe that this project poses a threat to the environment or the social and economic conditions of inhabitants in the affected area and that the project does not impair the health, safety and welfare of these inhabitants. This shift in schedule and workforce increase does not alter our view of the project.

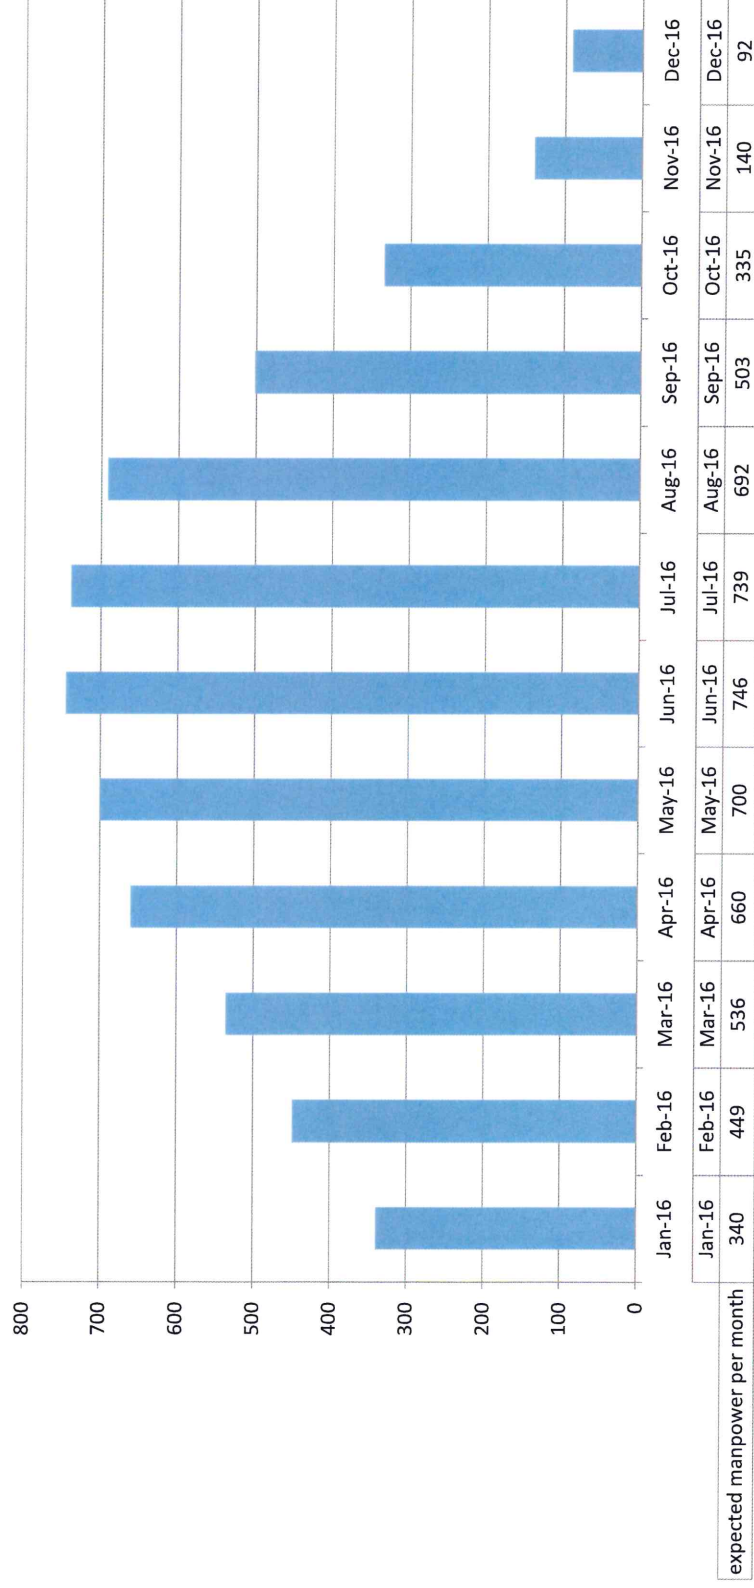

Should you have any questions or comments, feel free to contact me at 382-1519 or darin.howe@simplot.com. If you would like to visit the facility to get a first-hand look at the construction activities, we would welcome you at any time. We are available to meet with you in Cheyenne if necessary.

Sincerely,

Darin Howe
EHSS Manager
